Laboratory

Always deal with the best by testing, recording and comparing your purchased and manufactured products in Laboratory

Laboratory gives you the power to quickly and confidently make reprocessing decisions.

Record and track quality or test criteria for purchased and manufactured products, and lower your operating costs by identifying the lowest complying set of products for any given requirement. Grade-test product batches, then classify graded products depending on the desired use, release or future development.

Test results

Laboratory effortlessly handles, grades and classifies all types of test results.

If you are manufacturing the product, the test results are actual results.

For purchased products, enter results based on a sample or the certificate of analysis provided by the supplier. Enter actual results separately and compare them against the supplier's sample or certificate of analysis.

As each batch passes through its test procedures, enter the results obtained, along with related notes.

Once test results are entered, the batch can be reclassified. Laboratory automatically classifies the batch as the highest possible grade if all classification criteria are met.

If the new classification is flagged as usable, add reclassified batches to stock and make them available for sale.

Auditing

Laboratory allows you to audit classification and test result changes fully.

Batches requiring testing

Laboratory provides a screen that displays all non-classified lots and batches you have recently manufactured or received from your supplier. Use this screen to edit test results and classify batches.

Selection and dispatch

If a sales order requires a specific product grade, Pronto Xi only allows you to select lots that meet the specifications for that grade or a higher grade.

Laboratory highlights the lowest possible complying batch that meets requirements so that higher-grade lots are not unnecessarily selected or dispatched.

Regardless of customer requirements, only saleable grades can be selected for dispatch.

Analysis certificates

Products that have passed your quality tests are automatically issued an official certificate of analysis, which can be provided to your customers or to government agencies. Tailor the layout and test results printed on the certification document to your needs.
